TRANSFORM YOUR FOOD SAFETY CULTURE THROUGH COMPLIANCE & COMPETENCY

Our Food Safety pathway is dedicated to ensuring your team's compliance, safety, and competency. By keeping your employees up-to-date with changing regulations and thoroughly prepared for planned or surprise audits, we help safeguard your business while ensuring complete comprehension.

The pathway is comprised entirely of micromodules with built-in assessments, making it easy for employees to learn and retain critical information. Microlearning allows workers to engage with content in manageable chunks—whether they're on break, between shifts, or accessing training on a mobile device.

New Micromodules Provide Focused & Relevant Learning, Including:

-  SQF Module 11 coverage, preparation tips for on-site audits, and alignment with the latest federal regulations.
-  Specific, relevant content such as bloodborne pathogens, electronic SDS storage, and BRCGS requirements.
-  Content to prepare for the implementation of 21 CFR Part 1 Subpart S—Additional Traceability Records for Certain Foods law.

Ensure Competency Across Your Workforce with Micromodules in English, Spanish, Karen & Burmese

TRANSFORM YOUR FOOD SAFETY CULTURE THROUGH COMPLIANCE & COMPETENCY

Erik Kurdalek

Food Safety Subject Matter Expert

Erik Kurdelak advises on the development of the our food safety content and is a tenured food safety expert who is dedicated to studying, applying, and teaching the principles of food
